

## Helping You Work X Times Smarter, Faster, Better

**What is QuicKeys X?** *QuicKeys X is the first automation utility specifically designed for Mac OS X. It takes the daily tasks that would normally take you five ... six ... twenty or more steps and turns them into a simple one step shortcut. You can automate hundreds of tasks using QuicKeys: launch programs or files, select menus, mount servers, run Unix commands, or type text. Whatever you do, however many steps, QuicKeys saves you time and increases your productivity.*

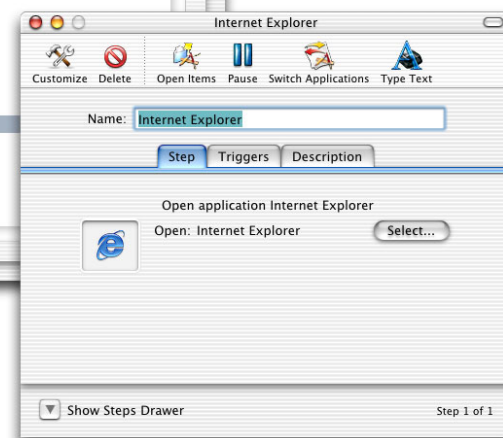

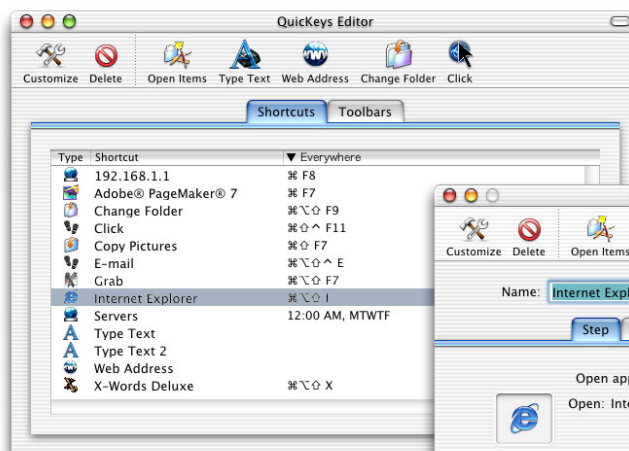

**How does it work?** *QuicKeys X performs shortcuts that automate the computer tasks you do each day. Unlike other macro utilities, QuicKeys does not require you to learn a sophisticated programming language. All you do is tell QuicKeys what shortcut you would like to create. Then choose a trigger (how you play your shortcut) that best suits you. You can scope your shortcut to play within a specific application or all applications. With a simple hot key, toolbar button, menu selection, or timer you'll be working X times smarter, faster, better.*

### Multi-step Shortcuts

QuicKeys X automates your Mac by creating shortcuts. A shortcut can consist of a single step or multiple steps. Mounting a server, launching an application, or typing text are examples of a single-step shortcut. The power of QuicKeys lies in its ability to create multi-step shortcuts by combining a number of single-step shortcuts. You could mount a finance server, launch a purchase order database, and type in company info in easily by pressing Shift F1. It's easy to drag and drop existing shortcuts to create multi-step shortcuts.

### Triggers

Triggers tell QuicKeys to activate your shortcuts. QuicKeys X offers a variety of ways to trigger shortcuts. A "hot key" (a combination of keys like Ctrl, Opt and Q) is the most widely used type of trigger. When using hot keys you can set them to be "sticky". Unlike a normal hot key sticky allows you to press and release keys in succession, such as pressing F10 then D then A. This significantly expands the number of key combinations available to you. Timers can activate a shortcut at a certain time of day and/or day(s) of the week. This is useful if you would like to download your e-mail or perform a backup while you are away. You can also include your shortcuts in the QuicKeys Dock menu on QuicKeys System menu. This is ideal for those shortcuts you don't use as often. Best of all, you choose the trigger that makes sense to you.

### Toolbars

QuicKeys X provides an easy way to create custom toolbars to activate your shortcuts. Like other triggers you can set the scope of a toolbar to work in a specific application or all applications. This is useful when using a word

processor or graphics program. When the program launches, the toolbar appears with all of your shortcuts just a click away. When the application is closed or put in the background, the toolbar disappears. Toolbar tabs allow you to have one toolbar with multiple tabs containing different sets of shortcuts. You can create one set for opening applications another for launching web sites and more.

### What can QuicKeys do for me?

Once you simplify your daily computer tasks with QuicKeys X, the benefits are obvious. By automating the work you do you save time and increase productivity. QuicKeys allows you to customize your Mac to work the way you want. You decide when and how each task happens. With QuicKeys X, all the different parts of your Mac-programs, documents, operating system and internet connection-work together.

## Product Specifications

**FILES:** *Manage Files, Open Items, Change Folder.*

QuicKeys X eases the chore of file handling and management. Move or copy files to a specified folder or to your desktop with *Manage Files*. *Open Items* accesses files and folders quickly, saving you time and effort. Don't waste time navigating folders in open and save dialogs—it's a snap with *Change Folder*.

**QUICKKEYS:** *Insert Shortcut, Pause Shortcut, QuicKeys Actions.*

Use *Insert Shortcut* to add an existing shortcut as a step in a multi-step shortcut. With *QuicKeys Actions* you can control different attributes of QuicKeys in a single step. *Pause* a shortcut during playback for greater flexibility when playing multi-step shortcuts.

**USER ACTIONS:** *Type Keystroke, Click, Mouse Recording, Menu Selection, Menu Clicks, Windows.*

Override keystroke assignments built into your applications with *Type Keystroke*, replacing them with keystrokes that make sense to you. Alleviate repetitive mouse movements with *Mouse Recording*. Click will simulate a mouse click and define its position relative to a window or display; also set click, drag and release duration. Select a menu by name or position with *Menu Selection*. Create a series of clicks to select a menu with *Menu Clicks*. Close, collapse or zoom a window, and toggle a windows toolbar with *Windows*.

**SYSTEM:** *Computer, Switch Applications, Terminal Command, Finder Views.*

Gain complete control of your Mac using *Computer* to automatically shutdown, restart, sleep or logout of your Mac. Changing to a different application is no longer a time-consuming hassle using *Switch Applications*. Running terminal commands can be a tedious task, but with the QuicKeys X *Terminal Command*, complexity is gone with a single keystroke. Change the view of either the frontmost window or all open windows to icons, lists or columns with *Finder Views*.

**SCRIPTING:** *AppleScript.*

If you need a scripting option, use QuicKeys to play *AppleScript*.

**INTERNET:** *Web Address, E-mail.*

The Internet should be simple and fun. QuicKeys X makes that possible with *Web Address*. Use it to launch your most frequently visited web sites. Need to send important messages faster and easier? Let QuicKeys X help you create *E-mail* messages with a predefined subject, body and address.

**NETWORK:** *Servers.*

Why waste time trying to connect to a server on your network? QuicKeys X will do it for you with *Servers*.

**TEXT:** *Type Text, Date & Time.*

Easily create and type frequently used text with *Type Text*. Save time and use QuicKeys X to automatically insert the *Date* and/or *Time*.

**Technical Support:**

CE Software is committed to helping customers find the answers they need, fast. You can speak directly with our technicians via telephone. This level of support is hard to find with other automation software.

**System Requirements:**

- ▶ Mac OS X 10.1
- ▶ G3 processor or greater
- ▶ 10 MB free hard disk space
- ▶ Certain features enhanced by Internet connection
