One Touch Control of your Mac
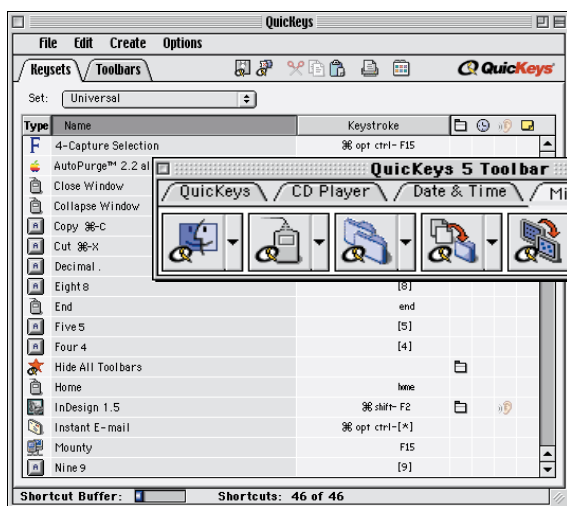

QuicKeys®
for Macintosh™

What is QuicKeys?

QuicKeys offers flexible, yet powerful tools that redefine the way you use your Mac. By automating any routine or repetitive task, QuicKeys not only allows your computer to work the way you want, but also saves you time. Simply record your keystrokes and mouse-clicks, then play them back when you need them. Automate anything from typing text to launching programs to controlling windows. The choice is yours. With hot keys, speech triggers, and powerful toolbars, using your Mac has never been so easy. Plus, the QuicKeys Setup Assistant makes it easy to get started. With QuicKeys, the ability to customize and control your computer is virtually endless.

How does QuicKeys work?

Together with the latest Mac OS, QuicKeys performs "shortcuts" that automate virtually all of the computer tasks that you do each day. Shortcuts can be created using the QuicKeys Setup Assistant, QuicKeys Editor or the recording feature. Plus, your shortcuts can be scoped to work only within a specific application or all applications. No one else gives you this level of freedom in how, when, and where to create shortcuts.

SEQUENCES

The recording feature is perfect for long or tedious tasks that you want to automate. Just turn on QuicKeys' recording feature, perform the task as you normally would, then choose how you would like to trigger that shortcut. The next time you activate that trigger, QuicKeys plays back the sequence. Just imagine all of the things you can automate with this simple recording feature. And as always, there's no complicated programming or scripting required to use QuicKeys! QuicKeys can automate virtually anything you do using your Mac, no matter how long or how many steps the task normally takes.

TRIGGERS

Triggers are what you use to tell QuicKeys when to activate your shortcuts. And the flexibility of QuicKeys offers a variety of ways to trigger your shortcuts. A "hot key" (a combination of keys like Ctrl, Opt and Q) is the most widely used and can be virtually any combination. With Speech triggers, new in version 5.0, you simply choose a key word or phrase to trigger a shortcut. QuicKeys also allows you to set a timer so that your shortcuts occur automatically. Monday at 8:00am, Tuesday and Thursday at 3:00pm, it's completely up to you. And best of all, you specify the triggers that make sense to you.

TOOLBARS

Wouldn't it be great to have a toolbar that holds exactly the tools you use most? One that shows up when and where you want it, no matter what program you're currently working in? Now you can! QuicKeys provides powerful custom toolbars that are easy to create. Have a file or a program you want to open frequently? Just drag and drop it onto a toolbar to create a shortcut. In fact, you can drag and drop any shortcut onto a toolbar, or build your own in the QuicKeys Editor. Tabs allow you to have multiple tabs on your toolbars providing easy access to different sets of shortcuts. You can have sets for opening applications, formatting text and launching web sites all on differnt tabs of the same toolbar, without taking up extra space. To save even more screen space, Pop-out toolbars have been added. Residing primarily off-screen, a toolbar pops out when the mouse moves near it and return to hiding when the mouse moves away from it.

What can QuicKeys do for me?

Use QuicKeys to automate two or three daily computer tasks and it becomes obvious. QuicKeys saves you time, effort, and allows you to customize your Mac to work the way you want. You decide when and how each task happens. QuicKeys makes all the different parts of your Mac — your programs, your documents, your operating system, your Internet connection - work together.

Product Specifications:

SYSTEM TOOLS:

Alias Keystroke, Button, Click, FKeys, Menu, Mousies, Specials, App Switcher, Lock Screen, MacOS Specials, Powerbook Specials, Scrap Ease,Screen Ease, View Switcher

Re-map your existing hotkeys with Alias Keystroke. Have complete control of your sequences with Button, Click, and Menu tools. Simplify your most common mouse movements with Mousies. Use Specials to control your windows or shutdown your Mac. Store multiple clipboard items with Scrap Ease. Change the style, size and arrangement of your icons with View Switcher.

FILE TOOLS:

File Launch, Batch Processor, File Handler, File Recall, Folders, Project Saver

QuicKeys offers an array of tools to aid in the handling and processing of files. Edit multiple files at one time using Batch Processor. With File Handler you can rename, copy, move files and more. To look up files that have been modified recently you can use File Recall. Use Folders to access your frequently used folders quickly. Open all of your applications and documents with one step using Project Saver.

TEXT TOOLS:

Advanced Text Tools, Password Vault, Type Date, Type Text, Type Time

Do you use lots of repetitive text daily? Use the Advanced Text Tools to clean and format text from the web and e-mail. Keep your passwords private with the Password Vault. Boilerplate text can be created and accessed easily with Type Text.

SCRIPTING TOOLS:

Apple Events, AppleScript, DoScript

Scripting tools are for those that want or need a variety of scripting options. You can send Apple Events directly to running applications, or use AppleScript and QuicKeys to run scripts or control applications that do not support AppleScript. Or use DoScript to directly send application specific scripts.

MULTIMEDIA TOOLS:

Audio CD Player, QT Movie, Sound, Speak Ease, SpeakerChanger

QuicKeys offers a suite of tools for one touch control of your multimedia applications. Use hotkeys to operate your Audio CD Player or QT Movies. Use Sound to toggle between alert sounds. Set your volume or adjust the volume with SpeakerChanger. Trigger your computer to speak text with Speak Ease.

NETWORK TOOLS:

Choosy, Mounty, Network Switcher

With a variety of network tools, navigating is just one click away. Accessing drives on the network with Mounty has never been easier. Use Choosy to switch printers. Instantly change your network settings with Network Switcher.

SEQUENCE TOOLS:

Decision, GoSub, Jump, Message, Pop-up Menu, Repeat, Wait

When using buttons, cursors, windows and others Decision is used as an if/then statement. GoSub allows you to trigger a different shortcut within a sequence. To bypass specified steps you use the Jump tool. The Message tool is perfect for adding user prompts to your sequences. Pop-up Menu allows for the navigating and using of pop-up menus in your sequences. For buttons, cursors, windows and others use Wait to pause a sequence until specified characteristics are present.

INTERNET TOOLS:

Instant E-mail, Web Launcher

Internet tools make your on-line experience simple and fun. Use the Web Launcher to launch your favorite web sites. With Instant E-mail you can enclose any file and send email with one push of a button.

Technical Support:

CE Software is committed to helping users find the answers they need, fast. You can speak directly with our technicians via telephone, free of charge. You won't find this level of support with any other automation software.

System Requirements:

• Mac OS 8.5 or greater • PowerPC processor • 16 MB of RAM (32 MB recommended)
• CD ROM Drive • At least 8 MB of hard disk space • Certain features enhanced by Internet connection
